Direction

For beef and dairy calves from 10 days old till 10weeks old. This should be fed in conjunction with milk but must be feed with roughage in the form of hay or chaff. We recommend using self feeders for the best results.

This product is suitable for cattle only. The above feeding rates are a guide only. Variances due to pasture quality, climate, workload and age of cattle will give different results. Please use the feeding table as a guide only and ensure feeding guide is introduced gradually, as unobserved diet changes can be detrimental to the final results and/or the animals health.
